Re: Instructions to prepare for pest control services for the control of German Cockroaches.

Dear Tenant,

Below is a list of instructions and suggestions to help guide you through the process of preparing properly for a service to control German cockroaches. Your compliance with the following will insure you of the best service.

- Inspection of all rooms will be done by the technician.
- Discuss sightings and evidence with the technician. Capture several insects in a jar or container for identification.
- Any area where roaches have been seen should be emptied and cleaned before the technician arrives. (Usually kitchen cabinets, behind the refrigerator and stove as well as bathroom cabinets)
- Remember you may not know where the roaches are hiding so the more you prepare for treatment the better.
- It will be necessary that all baseboards be cleared prior to service. Move all items two (2) feet from the walls where possible.
- We will spray dressers and drawers only if all the clothing is removed.
- Be prepared to leave your apartment for a period of four (4) hours after it has been serviced.
- Humans and pets should not touch treated areas until the material has dried.
- After service is completed, allow four (4) hours to permit the cabinets to dry and then place NON-ADHESIVE shelf paper down before putting anything back in the cabinets
- Clean only counters and other surfaces where food and utensils are used or stored.

It is to your benefit if you cooperate with our technician, since the more thorough the service, the less likely your problem will persist. If you have any questions, please call us at 973-398-0990

Thank You,
Moore Control Exterminating Co.
